The *Farm Income Situation* is published in February and July. A Supplement to the July *Farm Income Situation* is published in August containing detailed State series of farm income data.

SUMMARY

Realized net farm income last year was $27.2 billion, some 15 percent short of the record $32.2 billion in 1973. However, 1974 was the second best on record and 55 percent higher than the 1972 income level.

Farmers' realized gross income edged over the $100 billion mark for the first time in 1974. Cash receipts from farm marketings climbed $6½ billion to a record $95 billion. Direct government payments fell sharply to $½ billion, down from $2.6 billion in 1973. But a $10 billion surge in production expenses more than offset the gain in income and resulted in the drop in net farm income.

Total personal income of farm people declined last year. Income from farm sources was off almost one-fifth, while nonfarm earnings were up one-tenth. Per capita disposable income (after taxes) for farm people averaged 99 percent of that received by nonfarm people, a sharp drop from the record 113 percent ratio of 1973.

Crop production this year will play a major role in determining farmers' 1975 net income. Farmers have indicated their intentions for enlarged production, with increases in planted acreage of winter wheat and intentions to plant soybeans more than offsetting a sharp cut in acreage intentions for cotton. However, 1974 proved that increased acreage doesn't mean increased production, if yields are plagued by weather. No objective information on 1975 yields is available now.

The outlook for prices of 1975 crops is highly sensitive to supply and demand developments both here and abroad. Increased farm output from 1974 levels with reduced utilization could lead to lower net farm income. On the other hand, crop output similar to that of 1974 and high utilization would tend to keep prices high and thus maintain net farm income.

For livestock, some slight improvement in receipts over last year's poor performance is expected.

Farm income prospects for the first half of 1975 have weakened. Prices for major crops have not shown anticipated strength in recent months. Even taking into account uncertainties concerning 1975 crop output, realized net farm income in 1975 is likely to show a sizable downturn from 1974.

Production expenses are continuing their persistent rise. The 1975 prospective increase in outlays is expected to be below that experienced in 1974. Feed

costs may be somewhat lower and fuel and fertilizer prices are not likely to show the dramatic rise of 1974.

The farm income outlook for 1975 is clouded by uncertainties in the general economic picture. Demand is likely to be constrained by high unemployment and a high rate of inflation. On the other hand, proposed tax cuts would help to bolster domestic demand. Developments in the world food, energy, and financial picture will also affect the 1975 outlook for our Nation's farmers.

FARM INCOME IN 1974

Cash Receipts

Cash receipts from farm marketings in 1974 are estimated at $95 billion, a record high and $6.4 billion above 1973. The sharp rise in receipts was due to 6% higher average prices for farm products. The total volume of farm marketings was nearly the same as a year earlier.

Crop receipts last year, at $52.7 billion, were up $10.3 billion from 1973. Prices averaged 29 percent higher, but the volume of crop marketings was off 2 percent, reflecting the poor outturn of 1974 crops.

Leading the list of gainers in the crop sector was corn, up around $3 billion from calendar 1973. The volume of corn marketings was off about 6 percent. Poor planting and growing conditions last year resulted in a corn crop of 4,651 million bushels, compared with 5,647 million bushels a year earlier. Farm prices for corn marketed in calendar 1974 averaged more than 50 percent higher than a year earlier. Receipts for other feed grains and hay also were higher due to more favorable prices.

Receipts from wheat marketings were up $2.1 billion. Prices averaged some 40 percent higher while marketings were little changed from year earlier levels. Rice growers registered an increase of about $200 million due to a much larger crop. Farm prices for rice fell during the year and averaged somewhat below the high levels of 1973.

Soybean prices averaged up 25 percent resulting in a gain of $1.4 billion in marketing receipts. The 1974 soybean crop suffered from adverse weather; the crop was down 20 percent and marketings for calendar 1974 dropped. Cotton receipts were up about $¾ billion due to higher average prices. However, cotton prices to growers by year's end were running around 44 cents per pound, compared with 51 cents in January 1974. Early 1975 cotton prices have declined further. Marketings for calendar 1974 were down from a year earlier, reflecting a reduction of 10 percent in the 1974 cotton crop from 1973.

Tobacco receipts were substantially higher, up about $½ billion, as both prices and marketings increased from year earlier levels. Receipts for vegetables made considerable gains. Calendar year grower prices for potatoes averaged much higher, leading to a jump of about $600 million in receipts; prices dropped sharply late in the year and in December were 30 percent lower than in January 1974. For the vegetable group, receipts were also much higher for tomatoes, sweet corn, peas, and cucumbers. For the fruits and nuts group, receipts increased about $300 million with the largest gains registered for oranges, peaches, almonds, and apples. Receipts dropped for grapes, pecans, and walnuts.

Livestock and product receipts for 1974, at $42.3 billion, dropped $4 billion from the record 1973 level. The income situation for cattle producers was particularly bad in the second quarter of the year as prices plummeted. Cattle and calf receipts for the year, at $19 billion, were down $3.8 billion. Cattle prices averaged 15 percent lower while marketings were up about 3 percent. Hog receipts, at $7.1 billion, were down about $½ billion. Producer prices for hogs averaged 13 percent lower while slaughter increased 6 percent from 1973 levels. Recent prices for cattle at the farm averaged $27.60 per cwt., compared with $44.40 in January 1974. Hog prices to producers in recent months, at $38.25 per cwt., were down only $2.00 from early 1974, as supplies tightened.

Poultry and egg receipts totaled $6.2 billion, down some $700 million from 1973. Broiler producers experienced a sharp drop in receipts, off $300 million in the face of an 11 percent drop in prices. Turkey receipts were off some $200 million, as prices declined an average of 16 percent while marketings were up slightly. Receipts for eggs were down slightly due to lower prices and marketings.

Dairy producer receipts were up $1.2 billion to a level of $9.3 billion. Prices paid by plants and dealers for milk averaged $8.25 per cwt. about 15 percent higher than in 1973.

In 1974 crop receipts, at $52.7 billion, exceeded livestock and product receipts by a wide margin—about $10 billion. This is the first time since the mid-1920's that crop receipts have been larger than livestock and product receipts.

Direct government payments to farmers last year were estimated at about $0.5 billion, compared with $2.6 billion in 1973. The decline reflects the absence of large payments made in 1973 for feed grains, wheat, and cotton under acreage diversion programs. In 1974 about $200 million in payments were made to producers under the disaster provisions of the 1973 Farm Act.

Production Expenses

Farm production expenses, at $74.8 billion for 1974, were up $10 billion, another large increase. Prices paid for production items, interest, taxes, and wage rates jumped 15 percent last year.

The feed bill rose around $2 billion as prices averaged 17 percent higher. In early 1974, feed prices were up sharply from January 1973 levels but the gap narrowed by year's end. A huge cost increase occurred for fertilizer as prices averaged some 70 percent above a year earlier. Fuel prices also zoomed upward, resulting in much higher outlays by farmers. Seed prices, reflecting tight supplies, were up one-third. The only major farm input showing a drop in price was feeder livestock. Prices averaged 25 percent lower, resulting in a drop in farmers outlays for purchased livestock.

Gross and Net Income

Realized gross farm income last year reached a record $102 billion; the increase in cash receipts from marketings of $6.4 billion more than offset a drop of $2 billion in direct government payments. Production expenses, at $74.8 billion, rose about $10 billion, more than offsetting the gain in gross income. This resulted in a drop of $5 billion in realized net farm income from the record $32.2 billion of 1973. However, the 1974 level was well above any other year. Realized net income per farm averaged $9,611 in 1974, compared with $11,332 in 1973.

The total personal income of farm people, at $46.7 billion in 1974, was down $3.7 billion from a year earlier. Income from farm sources dropped while income from nonfarm sources rose. After taxes, the disposable personal income per capita of farm residents, from all sources, was $4,577 while that of nonfarm residents was $4,625. Thus, the ratio of farm to nonfarm income was 99 percent last year. This compares with 113 percent in 1973 and 73 percent in 1970.
